TechNova Solutions

IT Support & Equipment Policy

Laptop Issuance Policy

All full-time employees are issued a company laptop within 5 business days of joining. The laptop remains company property and must be returned upon resignation or termination. Employees are responsible for basic care and must report any damage within 24 hours to the IT helpdesk.

Software Installation Policy

Employees may install approved software from the internal software catalog without prior approval. Installation of unapproved third-party software requires written approval from the IT Security team. Personal use of company laptops for downloading unlicensed software is strictly prohibited.

VPN Access

Remote employees must use the company VPN (client code: TN-VPN-2026) to access internal systems. VPN credentials are issued separately from email credentials and expire every 90 days. Employees must contact IT support to renew VPN access before expiry to avoid service interruption.

Password Reset Procedure

Employees can reset their own password using the self-service portal at password.technova.internal. If the self-service portal is unavailable, employees must raise a ticket with IT Support with their employee ID for manual verification. Password resets over phone calls are not permitted for security reasons.

Hardware Warranty and Replacement

Company-issued laptops carry a 3-year manufacturer warranty. The internal asset tag format is TN-AST-XXXX, and this code must be quoted while raising any hardware complaint. Devices older than 3 years are eligible for replacement through the Asset Renewal Program, subject to manager approval.

Data Backup Policy

Employees must back up important work files to the company OneDrive at least once a week. IT does not guarantee recovery of data stored only on local drives in case of hardware failure. Critical project data should additionally be stored in the shared department drive.

Helpdesk Contact and SLA

The IT helpdesk can be reached at extension 4040 or via the internal ticketing portal. Standard tickets are resolved within 2 business days. Critical issues (system down, security incidents) are resolved within 4 working hours as per the priority SLA.
